YEARS OF EXPERIENCE

ABOUT ME

I'm a passionate Software Developer with over 4 years of professional experience having strong knowledge of the core concepts of software design and development. I have been doing back end development using Java and lately front end with JavaScript. I will always tend to dig in into different technologies. Finally, reliable, pragmatic, organized, with good interpersonal skills and always focused on my goals not only completing them effectively but also with the best quality for the end users.

WORK EXPERIENCE

Outsourcing Software Engineer for Verizon at NEWTECH, SRL

Mar. 2015 – Jul. 2018

- Using Apache Solr which is a search platform to store information, I implemented a multi threading solution to decrease the time it takes to load large volume of data from 24 to 2 hours.
- Lowered document management and archiving costs by implementing RESTful Web Services to store and retrieve electronic documents and images of paper-based information.
- Improved user experience and usability of the search platform by implementing auto suggestions and spell-checking.

Software Developer at BONANZA DOMINICANA

Jul 2014 – Mar. 2015

- Expanded the market for their products by developing the login and registration features of their new e-commerce website.
- Helped to get started the migration of legacy systems to Enterprise Java based technologies to improved user experience and performance.

Previews experiences:

- Made iDempiere (ERP) system compliant with the tax receipt rules by developing an OSGI plug-in that allows the inclusion of a unique tax number to every generated invoice.
